← Verify emergency location service = enabled (submenu 1)

Emergency Location Service

Use Emergency Location Service

Good

If the supplemental Emergency Location Service is supported by your device in your region, when you call or text an emergency number, your device may automatically send its location and other critical information to emergency responders.

When you call or text an emergency number, Emergency Location Service may use your device's location with Google Location Accuracy to determine the most accurate location for your device, even if those settings are off. Emergency Location Service may also turn on your device's Wi-Fi setting. If Emergency Location Service is off, your mobile operator may still send your device's location during an emergency call.
